MIND Research Institute info@mindresearch.org

Come together as a community to **engage all families for 5 nights with delightful math games and stories** - all on your own time and from the comfort of your own home.

All content is available for free directly to all families in English and Spanish. No matter how big or small, hosting a math week minimizes the time, energy, and cost of an in-person event and maximizes community impact.

Through rich story-based mathematics experiences, a math week offers a unique and organic opportunity for families to change their perception of math and abate "math anxiety." The stories serve as a catalyst for the community math week and are grounded in the world around us allowing the experience to be about math, literacy, history, and geography in a culturally relevant way. The games and stories feature several countries including Lesotho, Madagascar, Ghana, and China.

All content is available **completely free** on the website. To access the games, simply click on the day of the week and find your grade and language. Then, flip the card over. Families can play for as little as 15 minutes or replay over and over lasting more than an hour on any given night. For those that want to reduce screen time, we have physical print options for access to the content and games as well.

Any and ALL math experiences outside of a normal week count. Use the games and stories on our website or dust off your favorite math game and play it as a family. Fill out the nightly survey so we can keep an official track of your families' contribution to the community math week goal! Have fun and learn together about the beauty and joy of math!
